About me

I have 4 hobbies: work, traveling, sport and reading.

I always try to connect these 4 things. I learn new stuff every day to be on a top of Android technologies and best practices. I have been working with Android more than 6 years and I worked with technologies like:

- Android
- Java
- Gradle (Maven)
- XML
- Node JS
- JSON
- HTML
- Python
- GIT

Experienced with android studio & eclipse, most of my projects oriented on mobile and tablets but I have a little experience with Android TV as well.

Common libraries and tools which help me in developing process: **Android Support Library, Dagger 2, ButterKnife, EventBus, RX JAVA, ORMLITE, AppsFlyer, Optimizely, AppSee, Farebase, Google Analytics**

Currently in my free time I usually work on my small start-up specializing in nodejs and other web stacks.

Some of my published apps:

- **Math Games** – <https://play.google.com/store/apps/details?id=com.ansoft.mathforkidspro>
- **Kandara Icons** – <https://play.google.com/store/apps/dev?id=5197566715645153751>
- **Rangeen Icons** – <https://play.google.com/store/apps/dev?id=8552302957435904913>
- **Unpark Me** – <https://play.google.com/store/apps/details?id=com.kandara.unparkme>
- **Smart PG** – <https://play.google.com/store/apps/details?id=com.kandara.medicalapp>

Projects

Scoreh

July 2018 – Present

Description

It is an easy to use web application to create, design, assign and analyze online assessments. Creating a test is just a click of button away. When you click on create test, system will create a predefined test based on standard test settings. But If you need to customize then everything is simple and is effective right away.

When you finish adding all questions to your test, you can start inviting candidates right away. You can either make your exam public or private. If the exam is public then users can access it right away but if it's private then the system will just email your candidates from the system.

My responsibility

- Involved in designing the UX of the whole platform.
- Developed and design overall database management system for the platform.
- Developed the backend API for the system.
- Developed the frontend of the system including the admin panel and test takers panel.

Technology stacks

- Core JavaScript
- Node JS
- Android
- Java
- MongoDB
- Node Components
- HTML, css

Smart PG

Mar 2018 – July 2018

Description

Smart PG is an online platform for PG aspirant to get prepared for their big exam. It offers an android and ios (soon) application to get prepared for the exam. The mobile application is a whole package to make the textbook of the same author mobile interactive.

Smart PG is the demand of technological era. It encompasses a complete syllabus including all past questions for PG preparation in the handy format. Smart PG includes student friendly features like instant search option, various interactive modes of study, online model tests, self test options and many more.

Smart PG is the best available digital platform for PG preparation. When free, take your mobile and start reading, anytime, anywhere.

My responsibility

- Involved in designing the overall UI of Android app.
- Designed the overall database of system
- Involved in modifying the REST API required for the system
- Designed and developed the web application for admins to manage content.
- Designed and developed the test takers web panel for each exam
- Developed the whole android application.

Technology stacks

- Android
- Node JS
- Core Javascript
- Java
- MongoDB
- Node Components
- HTML, css

Icon Packs

Dec 2016 – Jan 2018

Description

In the course of nearly one and half year I was involved in developing and designing various icons packs for android. I with my co-founder developed and designed total of 12 icon packs. The combined total downloads of those entire icon packs is nearly one million in google play store.

Most of the icon packs we've developed are Paid and some of them are for free. We were also involved in designing and developing wallpaper app for android which is doing pretty well in play store.

My responsibility

- Come up with a concept for a particular pack.
- Designing the minimal icons for each app included in our icon packs.
- Developing the android app based on the open source icon pack library.

Technology stacks

- Adobe Photoshop
- Adobe Illustrator
- Android
- Java

- XML

Links
