Projects

GetJob-Job Portal

Duration: 1 Year

Language used: Java

Database: MsSQL

A web based application project which features finding suitable job for finding jobs according to their area of interest for various job seekers and posting different job vacancies for the employers. It was done as our major project at seventh semester.

E-Shopping

Duration: 6 months

Language used: Java

Database: MsSQL

A web based application project which features online commerciality of various electronic goods(branded or used goods). It was done as our minor project at sixth semester.

Bus Reservation System

Duration: 6 months

Language used: C++

Third semester project done in C++ for making passengers easier to reserve a seat by viewing the available seat in the available bus along with their routes and destination.

Stationary Billing System

Duration: 6 months

Language used: C

First semester project done in C for creating a billing system which calculates the total by just entering the items bought in the system choosing various items along with the quantity. At last we created a digital bill through the file created by the system.
